

Super Pig

3" - 60"

Engineering, Inc.

10031 E 52nd St
Tulsa, OK 74146-5714

Description

The Super Pig was the first ever all urethane flexible body pig with replaceable parts, and today is still the industry leader. The Super Pig is an all MDI polyurethane, durable, light weight, and easy to use pipeline pig. Part replacement or reconfigurations is simple with only a single bolt to remove. The Super Pig can be redressed and assembled in the field much faster than conventional metal body pig. This feature alone saves down time and requires fewer field support personnel and equipment. Super Pig's unique construction and aggressive cup designs adapt rapidly to changing environments such as out of round pipe, dents and a broad spectrum of pipe wall thicknesses and tight bends. The Super Pig wears evenly and uniformly because of balanced and even weight distribution. This allows for periodic rotation of component parts to gain additional mileage. Whether your pigging requirements are cleaning, brushing, paraffin removal, dewatering, gauging, or descaling, in standard, heavy wall, super heavy wall, or multi-size pipelines, Super Pig cups/discs provide

superior seal and durability in lines from 3" to 60" inches. With many configuration options, the Super Pig is an excellent choice for even the most challenging pigging job.

Options

- Sizes 3" to 60"
- Interchangeable Components for Changing Job Requirements
- All Polyurethane Construction
- Brushes (Round/Paddle) - Carbon Steel, Stainless Steel and Protran
- Transmitter and Magnet Compatible
- Standard and Extended Lengths
- Cups, Discs, Multi Size, Dual Diameter, Paraffin Cups and Blades
- Several Durometer Hardnesses
