

The BelGAS^{CP} PL91/92 is a pneumatic pilot regulator designed to be used in conjunction with a control valve. This pilot regulator is designed to withstand the severely corrosive mediums associated with the oil and gas industry. The PL91 is an indirect acting pilot regulator that is designed to be paired with a pressure closing control valve. The PL92 is a direct acting pilot regulator that is designed to be paired with a pressure opening control valve.

Applications

- Separators
- Liquid Level Controls
- Scrubbers
- Wellheads

Features

- **Single Adjusting Screw:** Changing the set point of the unit's performance is possible by rotating the adjusting screw.
- **Accurate and Proportional Control:** Each turn on the adjustment screw results in a known change of the signal pressure set point. Each change in the signal pressure results in a proportional change in the output pressure.
- **Remote Installation:** Pipe the unit as close to or as far away as needed from the control valve it is driving.
- **Field Reversible:** Change an indirect operating unit to direct operating without removing the unit from the field.

Materials of Construction

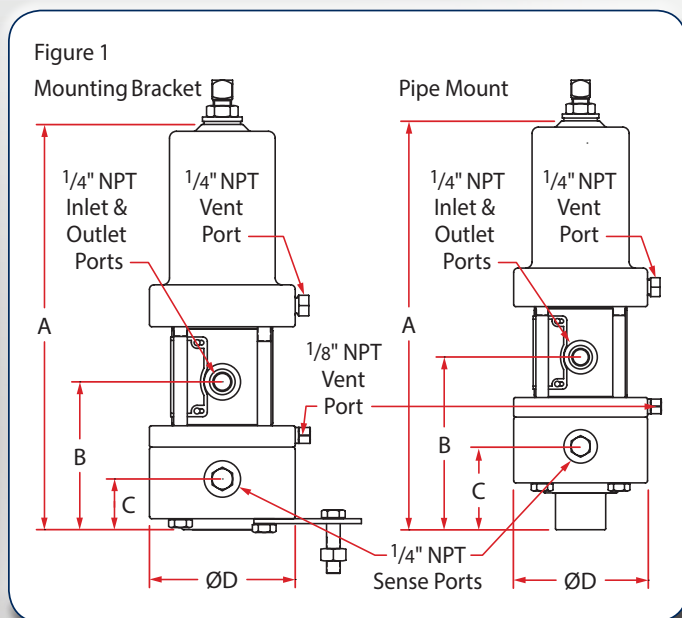

Part	Material
Bellows Assembly	Stainless Steel
Bonnet	Steel
Diaphragm	Nitrile or Fluorocarbon
Lower Housing	Steel or Stainless Steel
Main Body & Supply Body	Steel or Stainless Steel

Specifications

Supply Pressure	20 or 30 PSIG	
Media	Liquid or Gas	
Configurations	Direct or Indirect Action	
Mounting Options	Mounting Bracket or Pipe Mount	
End Connections	1/4" NPT	
Temperature	Nitrile	-40 to 180°F (-40 to 82.2°C)
	Fluorocarbon	0 to 300°F (0 to 148.9°C)
Sensitivity/Adjustment	125-1500 PSIG	
Sense/Output Pressure Change	1 PSIG	
Set Point Change	40 PSIG Per Turn
